Est. Cost: **\$22 Million**

Completion Date: **2023**

Client: **New York City Economic Development Corporation
One Liberty Street
New York, NY 10006**

The new pedestrian and bicycle bridge at East 54th Street in Midtown Manhattan will consist of an elegant clean span arch bridge over FDR Drive. The bridge will connect the adjacent neighborhood to a new linear park on the East River. The bridge has been designed to fit within the context of an existing park and the waterfront. It will have a distinct color and design features that include inclined arches and fencing for open views of the river and Roosevelt Island. All details have been designed with a context sensitive architectural design theme and consistent high quality detailing. The approach spans are ADA accessible and follow a curvilinear alignment for visual appeal and interest. The new bridge will become a new gateway structure along the East River and a source of pride for the community.
