

River North Pedestrian Bridge

Nashville, TN

Type: **Curved Arch**

Services: **Conceptual Design, Type Study Selection, Preliminary Design and Architectural Visualizations**

Cost: **\$50 Million**

Completion Date: **N/A**

Client: **Oracle Corporation
601 11th Avenue N
Nashville, TN 37203**

The bridge will connect a new campus for Oracle Corporation to Germantown, a residential neighborhood across the Cumberland River near downtown Nashville, Tennessee. The River North Bridge will help transform the East Bank of the Cumberland River by creating a signature structure visible from the new campus buildings and adjacent neighborhoods. The proposed bridge will cross the river on a diagonal, creating a fluid and exciting journey across the river with a variety of changing views of the riverfront and cityscape. An arch with an S-shaped configuration complements and balances an S-shaped bridge alignment, creating an infinity symbol that appears as a sideways number eight when seen from above. The highest point of the arch will be located at the center of the river. The bridge will have a clear span with no supports in the water, which will improve constructability and allow for ease of navigation.
